PROFESSIONAL EXPERIENCE

State Farm | Product Designer, Design Systems

February 2024 - Present

- Designed and modernized components as part of the State Farm Design System, using a system-based, scalable approach to replace the legacy system with long-term consistency and efficiency in mind.
- Defined and implemented the design token architecture (structure, naming, and governance), partnering with engineering and leading education initiatives to drive system-wide adoption and consistency.
- Established system-level principles and contribution guidelines to evaluate new components and patterns, enabling teams to move quickly while maintaining a high bar for quality, accessibility, and consistency.
- Led research on component usability and migration workflows, increasing designer satisfaction by 35% and significantly reducing time-to-design during system adoption.
- Built and owned internal design system tooling, including a design linter, migration utilities, and token selector, improving designer-engineer collaboration and reducing handoff friction.
- Advanced the system's future-readiness by introducing AI-enabled workflows, including Figma Code Connect-driven code generation, MCP agents, and AI-assisted templating for exploration through Figma Make.
- Acted as a design system champion through office hours, critiques, and working sessions, aligning product teams around shared standards and shaping system strategy based on real product needs.

Trulioo | UX/UI Designer

June 2022 - February 2024

- Designed, prototyped and tested multiple components and variants for our in-house design system, with a heavy emphasis on improving overall usability and accessibility metrics.
- Led accessibility audits and system-wide improvements, aligning the design system with WCAG 2.0 Level AA standards through improved color systems, interaction states, and component guidance.
- Designed and shipped an internal design validation tool that enforced correct design token usage, reducing design review time by two hours per feature and eliminating post-handoff token errors.
- Partnered closely with product designers and engineers to define component guidelines, usage documentation, and implementation standards, ensuring consistent application across products.
- Introduced scalable component contribution workflows and review standards, improving cross-team alignment and raising overall design system adoption and trust.
- Served as an accessibility and systems advocate, providing ongoing guidance and raising the quality bar for UI craft and technical execution across teams.

EDUCATION

Bachelor of Science, Computer Science

May 2022

San Francisco State University, College of Science and Engineering, San Francisco, CA

SKILLS AND TOOLS

Product Design

- UX Research, Design Systems, Mobile design, Rapid Prototyping, Responsive Web, Data Visualization, Interaction Design, Usability Testing, Human-Computer Interactions, UX Writing, Web Accessibility

Software Development

- HTML and CSS, Javascript, React, Figma Plugin API, Figma REST API, Svelte, ReactJS, NPM, SwiftUI, Git, Flutter

Tools

- Figma, Adobe Photoshop, Adobe Illustrator, Zeroheight, Rive, Xcode, Visual Studio Code, Github, Developer tools
